International Conference on Management for Sustainability: Strategies and Technology Intervention

In celebration of 25 years of academic excellence and innovative leadership, the School of Management Sciences proudly presents ICMS-2025, an international conference dedicated to advancing sustainable solutions for business challenges. The synthesis of sustainable with management is called sustainable management. The purpose of sustainable management is to ensure that resources (and a healthy world) are available for future generations while reducing emissions and energy consumption. It also applies sustainable techniques to enterprises, agriculture, buildings, and communities. In contemporary business, the idea of sustainable is being emphasized more and more, and ethical management decisions about company growth and development are taking into account the perspectives of the economy, the environment, and society as a triangle. The field of sustainable management has advanced significantly since the 1970s environmental revolution. To comply with Environmental Protection Agency (EPA) regulations, the majority of industry and commercial management teams during this time only considered sustainable to be crucial. Although it remained low on the list of corporate concerns, several businesses progressively started to view environmental protection as a social obligation throughout the 1980s. Sustainable management has grown in significance as the globe struggles with the growing threat of climate change because it helps businesses, communities, and facilities minimize their emissions while generating profit. Businesses are realizing more and more that they need to be sustainable to draw in clients, capital, and positive press.

This international conference (ICMS-2025) provides a platform to assimilate sustainable knowledge in handling business challenges. Through oral presentations of technical papers on pertinent emphasis issues, the conference aims to establish an efficient platform for environmental scientists, engineers, technologists, academicians, and industry professionals to share their research objectives and practical experiences.
