## ABOUT THE CONFERENCE

Industrial activities are developing day by day with the concomitant release of a variety of pollutants in environment. A large number of pollutants in air, water and soil medium now remain persistent due to their low degradation potential. In case of highly degradable pollutants, the quantum of generation becomes enormous in most cases, causing severe adverse effects. Thus improper waste management of various industries poses a serious threat to the ecological system and biodiversity. In spite of source reduction, recycling and recovery a number of industries fail to comply with the stringent standards for effluent discharge, stack emission and disposal of solid waste. Therefore, various state-of-art technologies need to be developed, which will ensure efficient waste management practice leading to zero discharge, zero emission and zero disposal. However, it becomes a great challenge to all sectors of industries to maintain desired environmental standard under a competitive market scenario. In order to address the above issues and to explore the newer technologies in the arena of industrial pollution control, the International Conference on Advanced Technologies for Industrial Pollution Control (ATIPC – 2018) was held during December 17 – 19, 2018. The present international conference is the second version of the earlier conference.

The conference is oriented to create an effective forum for the environmental scientists, engineers, technologist and the industry persons for sharing their research initiatives and real-life experience through oral presentation of the technical papers on relevant focus themes.

## CONFERENCE THEMES

The International Conference (ATIPC-2020) is planned to include the following themes.

- Water quality monitoring and treatment in industrial area
- Industrial effluent treatment, reuse and conservation
- Monitoring of industrial emission and control
- Industrial solid waste management
- Handling and disposal of hazardous waste
- Role of EIA and EMP in industrial pollution control
- Case Studies on industrial pollution control
- Industrial noise control and radioactive waste management
- Innovative technologies in industrial waste management
